NEW: OUTDOOR WI-FI MESH (BACKYARD WIFI COVERAGE)

Summer isn't the season to babysit a weak signal. We now offer a professionally installed outdoor Wi-Fi solution that extends your home network seamlessly into the yard: patios, pools, gardens—and outbuildings like shops or detached garages. No juggling networks, no clunky extenders. It's the same network, same password, just more coverage where you actually spend time.

How it works: our technicians mount a weather-rated outdoor access point and mesh it to your existing gateway. We place it strategically for coverage and run any necessary cabling to keep performance strong and latency low. You'll see the difference when you stream on the deck, watch a video from the shop, pull up security cameras at the barn, or to tunes in the garden.

Pricing is simple: \$8/month for the managed outdoor AP, plus a one-time \$150 installation fee. Because it's fully managed, if anything goes sideways, our local team can diagnose it and swap hardware if needed—no finger-pointing between brands or apps. If your property has unique coverage needs (trees, metal siding, long distances), we'll advise on placement or cabling during the site visit so you get the best possible result.

This offering pairs well with our buried fiber network's baseline reliability. Underground fiber means fewer weather-related issues, and adding a purpose-built outdoor AP means you're not trying to push a living-room router through brick, insulation, and foil-backed sheathing. It's the right tool for the job—in the right place—so the backyard becomes as connected as the family room.

Interested? Call or text us (details below), and our customer service reps can schedule a quick assessment and installation window that fits your week.

RECONNECT 3 CONSTRUCTION UPDATE: PHASE 1 WRAP-UP, PHASE 2 ON DECK

Thanks to a lot of hard work by our team (and a lot of patience from our neighbors), Phase 1 of ReConnect 3 is winding down. This first phase has focused on the area east of Centralia and north of Mexico, and many of you have seen plowing, boring, splicing, and fiber cabinet work as we've pushed fiber closer to every home and farm. As we complete final splices and testing, we'll continue scheduling service drops and installations in the order areas are ready, with our team communicating timing directly to affected addresses.

What's next? Phase 2 begins this fall. This phase will finish out the remaining area north of Mexico, then extend east toward Laddonia—brushing right up to town limits—while covering the communities of Rush Hill and Benton City. If you live in those areas, here's how to get a head start: make sure any locate flags that pop up in your yard are undisturbed, keep an eye out for our construction crews, and pre-register for service so we can plan your drop in advance. Early sign-ups don't obligate you to start billing; they simply help us engineer the most efficient path to your home so we can move quickly when your area goes live.

As a reminder, ReConnect 3 is a multi-year build that will ultimately cover hundreds of square miles. We've said it before because it matters: this is a large, rural project, and our goal is to do it once and do it right. That means careful engineering, underground construction (buried is better), tidy restorations, and staged activations as each pocket is fully ready. The payoff is a rock-solid connection built to last—especially important when the weather acts up. Our buried fiber is protected from ice, wind, and storms that can bring down overhead lines, which is why it's considered the gold standard for reliable internet.

CONNECTION

If you've followed earlier updates, you know ReConnect 3 is a big lift for our cooperative—spanning a wide rural footprint—and it builds on the groundwork we shared in prior newsletters as we moved from environmental clearance to breaking ground and then into sequenced “fiberhoods.” We'll keep communicating as each segment comes online so you're never guessing about timing in your neighborhood.

What should you do right now if you're in or near Phase 2? Two easy steps: (1) pre-register so we can map your drop, and (2) watch for our construction partners marking utilities and restoring yards as they go. If you see us near your mailbox, give the crew a wave—we're getting you connected as fast as the engineering, permitting, and splicing steps allow.

TEXT US ANY TIME: REAL PEOPLE IN AUXVASSE AT 573-386-2241

We know that sometimes a text is just easier. Maybe you're on a job site, stuck in a checkout line, or trying not to wake a napping baby—no problem. You can text Kingdom at our main number, 573-386-2241, and your message will go straight to one of our customer service representatives. These are real, local people sitting right here in Auxvasse, Missouri—not bots, not offshore scripts. Tell us what you need in a sentence or two: schedule an appointment, request a call-back time, ask about service eligibility, add the new outdoor Wi-Fi option, or

check the status of a construction crew in your area.

Prefer to talk? That same local team is happy to pick up the phone and walk you through anything from plan changes to troubleshooting to construction timelines. The point is choice—whichever way you reach out, you'll hear back from a neighbor who knows our network and our roads. In our previous newsletters we've emphasized this “local first” approach and the value of a single, easy way to reach us; texting simply adds a faster path for quick requests while keeping the ability to talk to a person when the conversation needs it.

Whether it's a trench crew passing your driveway, a new mesh AP on the patio, or a same-day call-back set up by text, our aim is the same: make Kingdom's service easy to use and hard to live without. Thank you for trusting us to connect your homes, farms, and businesses—and for continuing to spread the word to neighbors as we build into Phase 2 this fall. As we've said from the start, doing it right the first time is how we keep our cooperative strong for the long haul.

Warm Regards,

Caleb Pashia

CEO/General Manager

P.S. ONE LAST THING
